

Manual root-cause analysis

Live sports funded by subscriptions and advertising

An on-call SRE must connect scattered evidence during an outage

01

Collect signals

Metrics, logs and recent changes

02

Search for guidance

Manually search runbooks and past incidents

03

Choose the next check

Reconcile guidance and find the owner

Disruption puts viewer trust, advertising delivery and subscriptions at risk

The OpenAI Platform & API

A foundation for faster investigation and controlled remediation

Vector Store

Runbooks, past incidents and owners
File Search retrieves relevant passages

Agent

Model, instructions and selected tools
Investigate, propose steps, call tools

CURRENT DEMO: RESPONSES API + FILE SEARCH

Review a grounded, cited investigation plan

Future: scoped tools for approved or low-risk automatic remediation

Sources: [File Search guide](#) [Configuring Agents](#)

Value and guardrails

Less search time, with evidence and control over actions

30% less time

to a correct next step

Unvalidated pilot target

Compare with manual triage

Potential: shorter disruption
and stronger viewer trust

MEASURE

Time, correctness and citation support

Unsafe advice, latency and cost

GUARDRAILS

Scoped access and current documents

Retention rules and human review

BEFORE AUTOMATIC ACTIONS

Enforced permissions, rollback and recovery checks

Next steps and recap

Knowledge supports triage. Controlled tools can support remediation.

01 **Validate** Six cases, citation support, safety and actual API waits

02 **Pilot** One SRE team, two incident types, manual baseline

03 **Expand** Approved fixes first, then bounded automation

Proposed next step: agree the pilot scope and success criteria
