

From signals to informed triage

Video streaming platform adopting Agentic solutions to improve manual remediation.

01 Collect signals

Metrics, logs and recent changes

02 Search for guidance

Manually search runbooks, owners, and past incidents

03 Choose the next check

Reconcile guidance. Find the path to remediate.

- Disruption puts viewer trust, advertising delivery and subscription revenue at risk.

The OpenAI Platform & API.

Review a grounded, cited investigation plan.

- Current demo: Responses API + File Search

OPERATIONAL KNOWLEDGE

Vector Store

Runbooks, past incidents and owners

Find relevant knowledge by meaning, even when the wording differs.

File Search

Relevant passages

Responses API

Model + retrieval

○ ○ ○ Cited plan

1 Next check

2 Source passage

👤 Engineer review

AGENT BUILDING BLOCKS

Model + instructions + selected tools

Your organization's knowledge, searchable in one place

FUTURE REMEDIATION

Scoped action tools & human-in-the-loop auto-remediation

Value and guardrails.

Less search time, with evidence and control over actions.

30%

less time to
incident resolution

- Estimated MTTR reduction target based on observed outcomes at similar organizations

Manual triage

BASELINE

OpenAI-assisted triage

PILOT TARGET

30% shorter

Illustrative target comparison.

01

Measure

Time, correctness and citation support

Unsafe advice, latency and cost

02

Guardrails

Scoped access and current documents

Retention rules and human review

03

Before automatic actions

Enforced permissions, rollback and recovery checks

Next steps and recap.

Shared knowledge. Cited investigation. Controlled action.

01 / EVIDENCE

Validate

Six cases, citation support,
safety and actual API waits

02 / ONE BOUNDED TEAM

Pilot

One SRE team, two incident
types, manual baseline

03 / FUTURE EXPANSION

Expand

Approved fixes first,
then bounded automation

PROPOSED NEXT
STEPS:

Develop a pilot scope and success criteria.
